

Humanity Growing Apart

Light and Nature as a Status in 2046

Presented by

Aidan Lo

MAT 10

Summer Session A

July

Formal Concepts

- Blue-green (nature imagery)
- Glowing (feels sci fi)
- stratification (dystopian idea)

(things I could associate with the future)

Humanity has grown apart as it has grown together in 2046.

As wilderness disappears and the light dims, the wealthy rise to the challenge.

A future where wealth buys luminescence and nature.

For naturally, all that glitters is gold, and now, green and blue.

Artworks

- Refined, Wealthy Edge
- Reduced, Public Utility
- Rising, Divided Growth

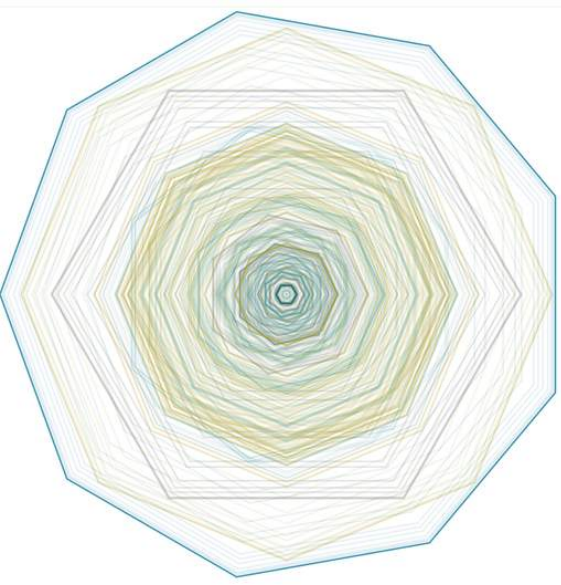

Refined, Wealthy Edge

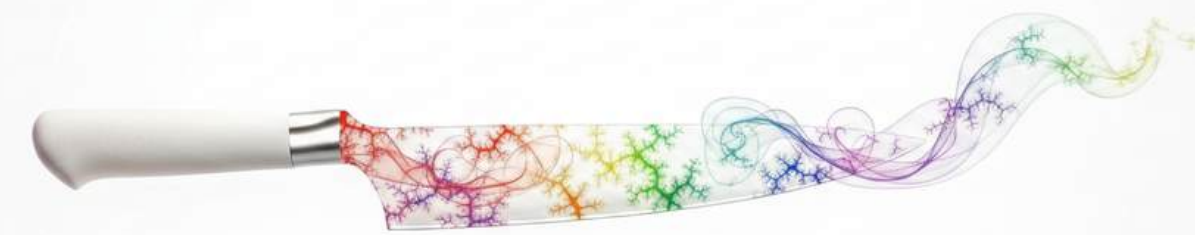

The higher one becomes, the greater access to finer materials and products, carving up the glowing pie with exquisite, radiant knives.

For the light is brighter the closer one is to the sun, paid for with wealth and refined even in everyday items, far superior to those below.

Generative Exemplars

Overarching Pathway

Reduced, Public Utility

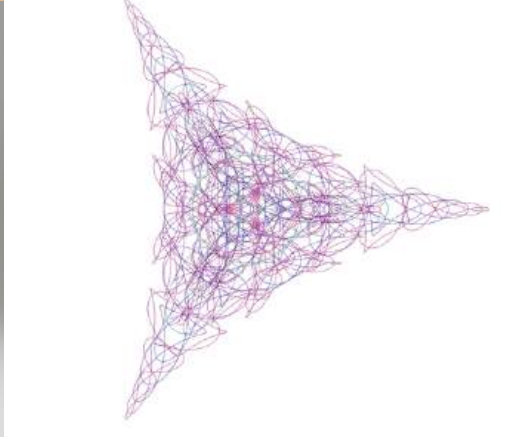

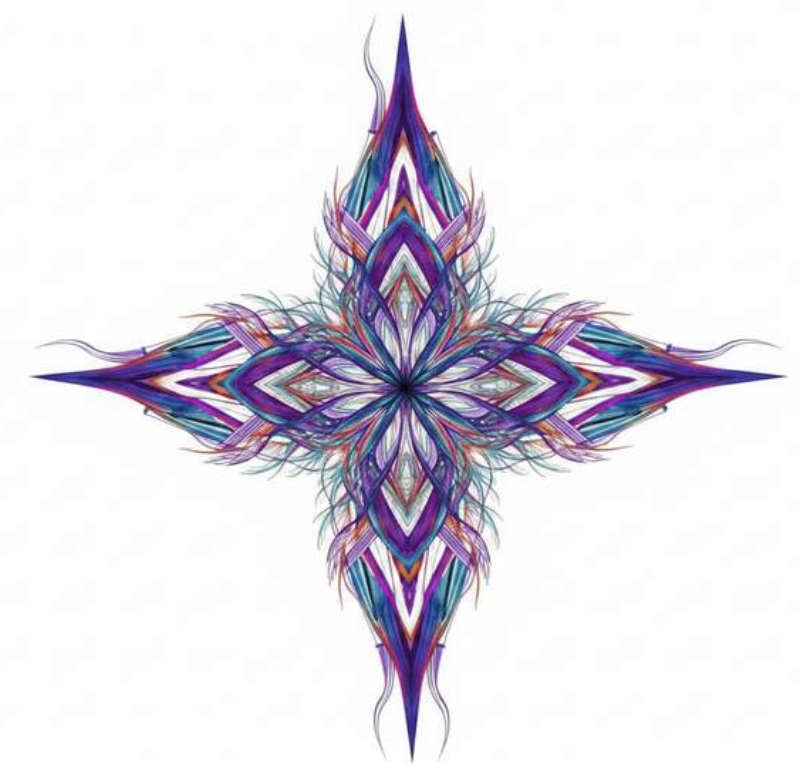

For most, the light and the flora are discounted, replaced with imagery deemed unworthy by the elite, yet still imitating those physically and economically above.

For those who are below must rest, acting as support for those atop, much like a public bench allowing rest for the lower classes.

Cultural, Generative,
Natural Exemplars

Overarching
Pathway

Rising, Divided Growth

The cities have grown upwards, the people together contained deep within, living their lives.

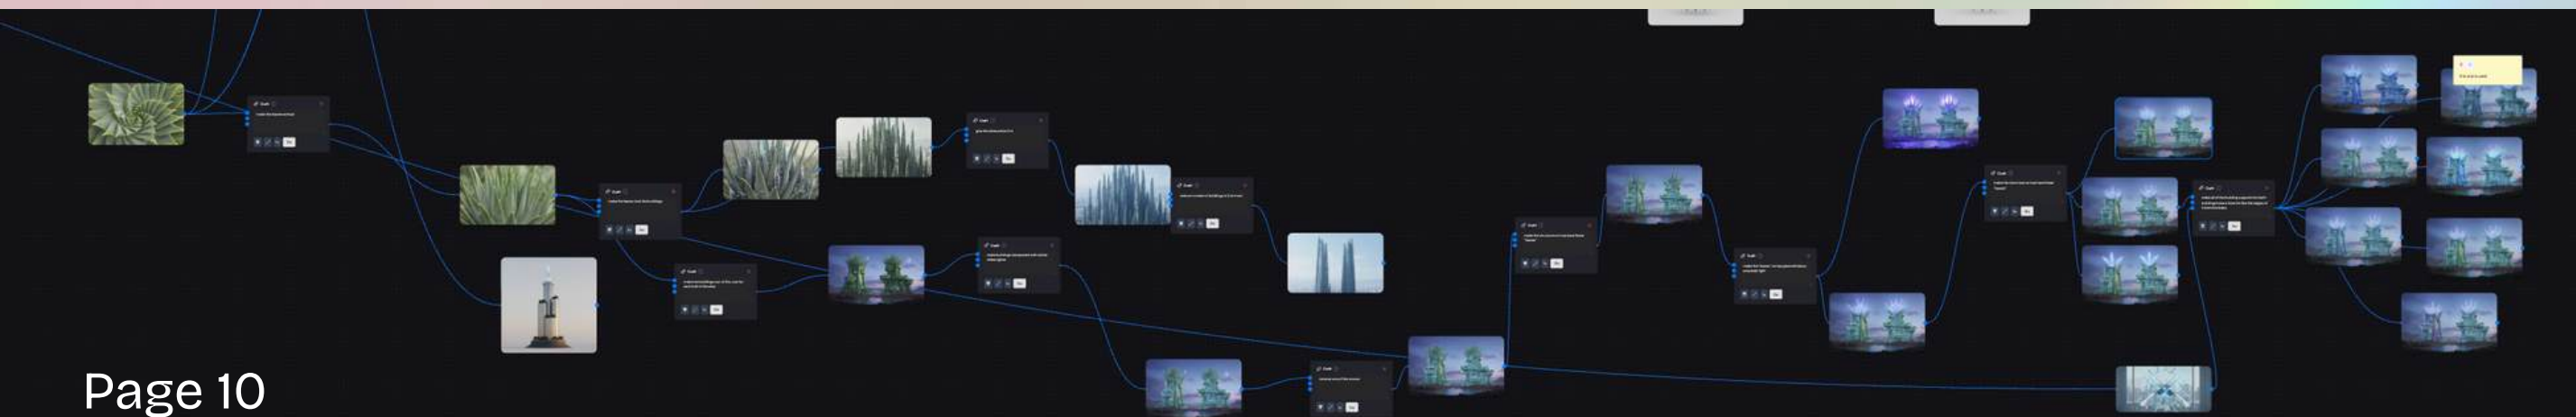

Yet the light and the nature has been divided, favoring those above in status and in elevation; stratifying yet assembling.
